Mike, I appreciate this.

I have a revised Sampling Plan ready but understood that EPA may be suggesting other text edits, so I am holding off.

Regarding the finger area, that was previously poled and the memo I am looking at now has those results. Goal is to get that to you today.

Stan,

A couple of things regarding the path forward:

- How will large pieces of debris be managed under the cap?
- EPA would like for the probing

(as mention in the sampling plan) to be expanded into the “finger area” to assess how potentially wide-spread the hard bottom/debris/refusal issue may be.

I’m sure your cap plan will address some of this, but these comments came up.

Mike
